NADTLAČNA KANALSKA ŽALUZIJA OVER-PRESSURE DUCT DAMPER

OPIS:

Nadtlačno kanalsko žaluzijo uporabljamo pri nizkotlačnemu prezračevanju, toplozračnemu ogrevanju, prezračevanju, kjer je potrebno izenačevati tlake med sosednjimi prostori in tam, kjer je potrebna samodejna prekinitve dovoda oz. odvoda zraka po izključitvi prezračevalne naprave.

KONSTRUKCIJA:

- dovod ali odvod
- nosilni okvir
- horizontalne nihalne lamele
- tesnilni trak na lamelah zmanjšuje šumnost pri zapiranju
- med-kanalska ali v-kanalska izvedba

MATERIAL: lamele so izdelane iz aluminijaste pločevine, nosilni okvir pa je lahko izdelan iz pocinkane pločevine, aluminijaste ali INOX nerjaveče pločevine

MONTAŽA: vgradnja na kanal z vijaki

DESCRIPTION:

Over-pressure dampers are used for low pressure ventilation, for heating and for ventilation where equalisation of the pressures between neighbouring areas is necessary and also in areas where automatic break of air supply or air exhaust is required after exclusion of a fan.

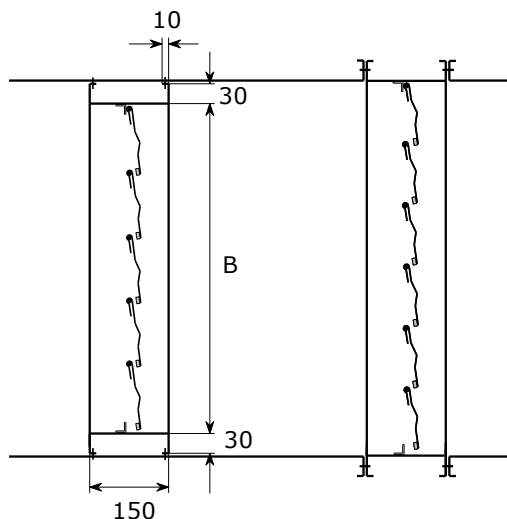

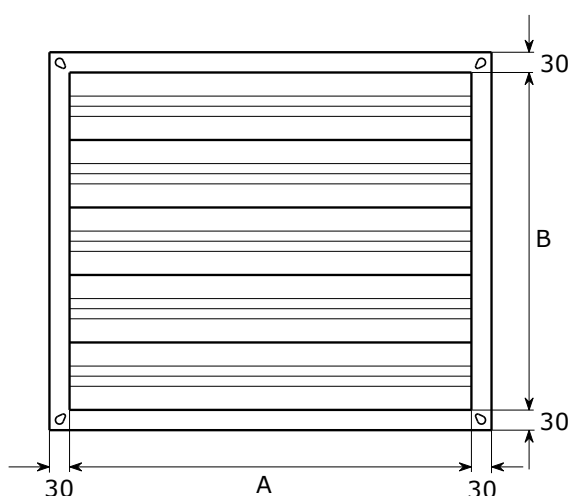

CONSTRUCTION:

- supply or exhaust
- supporting frame
- aluminium horizontal swinging blades
- soft tape placed on each blade silences the noise upon closing

MATERIAL: the blades are made from aluminium sheet metal. The supporting frame is made of galvanized sheet metal, aluminium sheet metal or stainless steel sheet metal.

MONTAGE: into or between ducts with screws

DIMENZIJE / DIMENSIONS:

v-kanalska
into duct

med-kanalska
between ducts

NAČIN NAROČANJA / HOW TO ORDER:

NKZ	600	x	200	ZN	med-kanalska
					način vgradnje / montage med-kanalska / between ducts v-kanalska / into duct
					material ZN, AL, INOX
					višina / height poljubna / optional
					širina / width poljubna / optional
